# CASE Status Report

Name: Sander Peeters

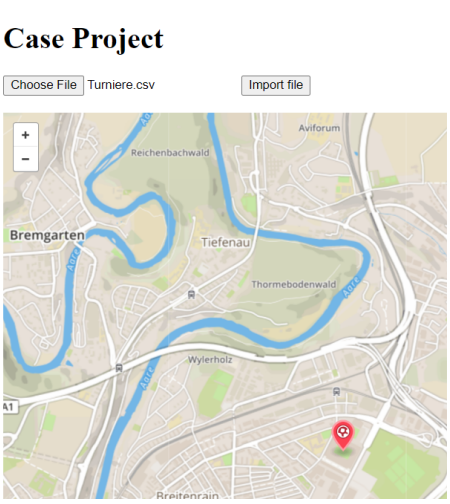
CASE title: Sport events

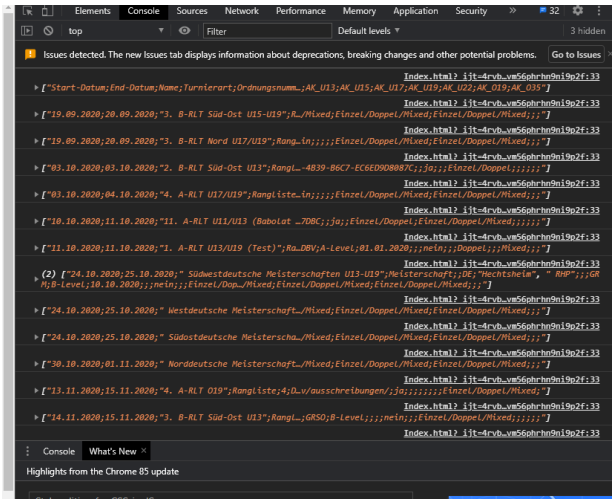
Report no.: 2

Date: 25/09/2020

## Current Activities and Problems:

I created a functionality where an user can upload a CSV file and then the system (temorarly!) prints the rows of the csv out in console. I have some difficulties with getting the values from individual cells. But Im pretty sure I can work it out.





## Reflection:

Getting to this point was not so difficult, there is a lot of online documentation about it. It's a little bit more difficult to get the individual values but I will try to work it out this weekend.

## Next Steps:

Exctract the location data from the uploaded csv file and then enter this data in the geocoding api. Then, I get long and latitude back and with that i can show the location on the map.
